**Detailed Action**

***Claim Rejection under 35 U.S.C. 103(a)***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12, 14-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wisotzki et al (US 4,900,545; 2/13/90).

Wisotzki et al teaches a composition (system) comprising water, an alcohol, a disaccharides, polymer (PVP) and benzyl quaternary ammonium compound. The reference teaches that the composition is an emulsion and is used to treat hair. See abstract, column 3 lines 28-63, claims 1, 10. The reference does not disclose the instant a) nm particle size and b) properties of the polymer - vapor transfer rate, transition temperature. One having ordinary skill in the art would optimize the particle size through routine experimentation. Transfer rates and transition temperatures of polymers are well known in the art. In a claim to a composition (system), the intended use of the composition has no patentable weight.

***Claim Objection***

Claims 13 and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base

claim and any intervening claims. The prior art does not make obvious or suggest the prior art composition comprising Calcium ions.
